Course “Proteome analysis by mass spectrometry”
Montevideo, URUGUAY

Organiser:
Rosario Durán (Institut Pasteur de Montevideo, Uruguay)
Co-organiser:
Instituto de Investigaciones Biológicas Clemente Estable and Fundação Oswaldo Cruz (Fiocruz)

This course aims to train young scientists and graduate students on state-of-the-art proteomics technologies with special focus on bioinformatics analysis of large datasets. It also intends to promote the applications for these technologies in participant’s research activity. Topics will include:

- Shotgun proteomics
- Topdown proteomics
- Bioinformatics analysis
- Structural Proteomics

Participants
- Students and junior scientist that aim to use proteomics in their research activity
- Poster sessions will be organised

Funding
- Grants will be available for nationals of ICGEB Member States
- Students subsistence costs will be covered (accommodation, daily transfers and lunches)
- Participants are expected to cover their own travel costs. Limited travel contribution will be available for selected students

Online application
https://www.icgeb.org/application-proteome-analysis-course-2020/
Deadline
30 June 2020
