## New Post-Doctoral position in heart mechanobiology

A post-doctoral position is available in the **Cardiovascular Biology Laboratory** at the **International Centre for Genetic Engineering and Biotechnology** in Trieste, Italy. The project has the ambitious goal of assessing whether the mechanisms that prevent the regeneration of cardiac tissue might also protect it from cancer, focusing on the mechanisms by which both heart and cancer cells respond to mechanical stimuli.

Applicants must hold a PhD in Biology, Biochemistry (or an equivalent scientific degree), be highly motivated, independent and experienced, and able to coordinate their own work with that of technicians and biological/medical doctoral students. Candidates will be expected to integrate effectively into an internationally collaborating team. The successful candidate will have an excellent background in cardiovascular or cancer biology, plus wide experience of experimental animal work, and will be fluent in spoken English.

The candidate will work in an international and highly-motivated, well-financed environment with modern equipment. The position is initially for 2 years, with the possibility of extension.
